

BRINI SILVIA

Degree in Chemistry and PHD in Public Health

From 1999 employed at the Italian Institute for Environmental Protection and Research (ISPRA); current assignment: in charge of the Area on air quality monitoring and operational climatology.

Since 2014 she has been coordinating the ISPRA working group that provides technical support to the National Committee for the Development of Urban Green Areas (CNSVP). The Committee was established with the Law 10/2013.

Part of the support activities for the Committee has been concerned the development of the National Guidelines for Sustainable Management of Public Green Areas, the National Strategy for Urban Green Areas, the annual Committee Report to the Italian Parliament as well as the organization of the annual Conferences on Urban Green Areas.

In 2019, during the International Exhibition of horticulture landscape architecture and green infrastructures in Padua, she promoted a technical workshop concerning the relations between air quality and urban green areas.

My main interest in the VEG-GAP project is to deepen the role of green infrastructures in urban areas as a useful measure in air quality plans to contribute to the reduction of concentrations of atmospheric pollutants.
